 Correct answers will be available on May 15 at 12am.

Score for this attempt: 10 out of 10

Submitted May 10 at 12:11pm

This attempt took 6 minutes.

Question 1

1 / 1 pts

Units of Measurement:

The px unit of measurement is an example of an absolute measurement.

Answer 1:

%

em

px

Question 2

1 / 1 pts

The em unit of measurement allows you to change the measurements relative to the parents font-size.

Answer 1:

%

em

px

Question 3

2 / 2 pts

Use the max-width property to ensure there is a set point when an element shouldn't grow any wider and the min-width property to set a point where an element won't appear too narrow.

Answer 1:

min-width

max-width

Answer 2:

min-width

max-width

Question 4

1 / 1 pts

Block and Inline Elements:

block elements by default take up 100% of the space they have, stretching from right to left as far as they can.

Answer 1:

block

inline

Question 5

1 / 1 pts

inline elements by default will allow other elements to share the same line as long as there is room, only wrapping to the next line once it's full.

Answer 1:

block

inline

Question 6

1 / 1 pts

There are two ways to center elements. margin: 0 auto will center the element's box itself and text-align: center will center the contents of the element's box.

Answer 1:

text-align: center

margin: 0 auto

Answer 2:

text-align: center

margin: 0 auto

Question 7

2 / 2 pts

CSS Selectors:

In an external CSS file the id selectors have the highest specificity ranking and element name selectors have the lowest specificity ranking.

Answer 1:

class

element name

id

Answer 2:

class

element name

id

Question 8

1 / 1 pts

I would use the selector div img to have just the images inside the div effected.

Answer 1:

div, img

div img

div.img
